

The Media Manager

The Media Manager lets you view all of your items easily in one place. View all types of media at once or select the drop down to choose images, video, flash, audio, or docs. Quickly add media to your manager by either uploading from your computer or importing images from your Flickr account. Add collections to better organize your media and use the search bar to search for your items by name.

Click on an item in your manager to view more information. Change the name and the description or delete the item. You can even go straight into the image editor from here by clicking "Edit."

The image editor allows you to crop, rotate, and resize your images all while inside of your Media Manager. If an image isn't working out while you're building your page, simply edit it in your manager - you never have to leave your Zeeblo builder!
